

# 180 UTENSIL HOLDER

kitchen utensils have a way of getting lost just when you need them. Such confusion can be avoided by building this special holder for them.

1. Cut the rack (A) and base (B) to size.
2. Drill appropriately sized holes in the rack to accommodate large spoons and other utensils.
3. Glue and tack a piece of decorative molding to the front of the rack as shown.
4. Butt the rack against the base, or rout a shallow groove for it. Fasten them together using glue and screws inserted from behind.
5. Dress up the holder by nailing various moldings to the front, top, and bottom edges of the base. The ones used on the original are profiled below, but choose moldings to suit your own taste.
6. Finish the holder as desired, then mount it on the wall or the side of a cabinet.

## LIST OF MATERIALS

(finished dimensions in inches)

<b>A</b>	Rack	3/4 × 3-1/2 × 12
<b>B</b>	Base	3/4 × 3-1/2 × 12
	Wood screws	
	Finishing nails	
	Decorative moldings	
	Wood glue
